

# Dilution™ SOLUTIONS

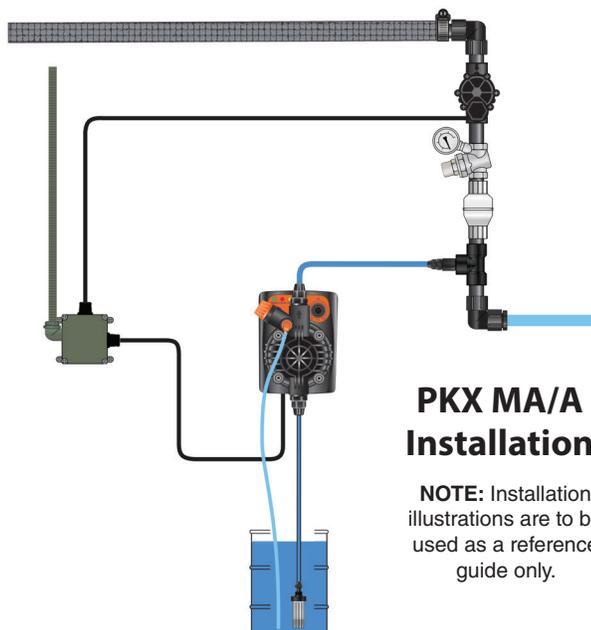

## PKX MA/A Quick Start Guide

Flow Rate 1.32 GPH, Max. Pressure 72 PSI

### Included in the Box

- PKX MA/A Pump
- Bracket mounting kit for wall or foot mount
- Operating instructions and maintenance manual
- Reducer fitting 1/2" MPT to 3/8" FPT
- Allen Wrench (to remove pump head when needed)
- Hose packet
  - Opaque, rigid PE tubing for the discharge
  - Clear, flexible, PVC suction tube
  - Injection valve
  - Foot filter

### PKX MA/A Installation

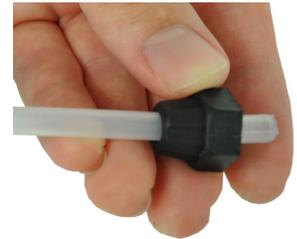

**NOTE:** Installation illustrations are to be used as a reference guide only.

### Part A: Attaching the discharge tubing on the top valve of the solenoid head

**1** Unscrew the top discharge valve nut and remove the red protective cap.

**2** Insert the rigid opaque tubing through the nut.

**3** Install the hose onto the discharge barb making sure the hose is seated up to the threads.

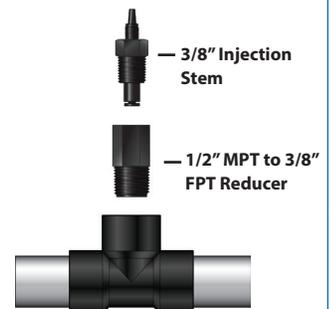

**4** Hand tighten the discharge valve nut.

**5** Remove the nut off of the injection stem and set aside.

**6** Insert the injection stem into the water line as shown below. Use Teflon tape on both threaded connections.

**7** Insert the other end of the opaque tubing through the injection stem nut, and attach the tubing to the injection valve barb, push all the way down to the threads.

**8** Hand tighten the nut onto the top of the injection stem.

(See back for Part B and C)

# PKX

## Part B: Attaching the suction valve tubing

- 1** Cut the clear PVC flexible tubing into two pieces the correct size for your application.

- 2** Unscrew the suction valve nut and remove the red protective cap.

- 3** Insert the tubing through the nut.

- 4** Install the suction tube onto the barb, push all the way to the threads.

- 5** Then hand tighten the suction valve nut.

- 6** Attach the foot filter to the other end of the tubing using the same process and place vertically in the stock solution.

- 7** Attach the second piece of the clear PVC flexible tubing to the orange barb. Place the other end of tubing into stock solution.

## Part C: Putting the pump into operation

- 1** To begin, set frequency adjusting knob to 100%.

- 2** Plug in the pump and press the power switch under the pump, to on (-).

- 3** POWER light should turn on when application activated. PULSE light flashes red when pump is feeding chemical.

- 4** Open the air bleed valve nut, when solution is visible in the priming tube re-tighten the nut.

- 5** Adjust the percentage knob to the desired level.

### CAUTION

See operating manual for complete instructions and safety standards. When connecting a metering pump either to a public water supply or to its own water source, you must respect the regulations in force concerning protection of the source i.e. backflow prevention, etc.

**NOTE:** Remove safety labels before installing and remember that pumps may hold water inside.
