ePC - Pulse Control

SPECIFICATIONS

The Etatron **ePulse Control** receives a reed input signal from a water meter and divides it into four equal and synchronous reed output signals. Use with a 1 pulse per gallon (1PPG) or 1 pulse per 10 gallons (1PP10G) water meter to eliminate any possibility of communication problems between devices.

ePulse Control features are:

- Signals multiple devices, independently, from a 1PPG or 1PP10G water meter
- LED indicator lights up for each pulse
- Flow Rate Calibration
- Flow Sensor Input

 **ETATRON**

ePC INSTALLATION
